

Daniel A. Fuentes

Austin, TX | 832-302-3211 | daniel.fuentes.sh@gmail.com | linkedin.com/in/daniel-a-fuentes/

Experience

Google Cloud | Austin, TX

July 2021 – Present

Customer Engineer (Aug 2022 - Present)

- Architected and deployed scalable, cloud-native backend services and data ingestion pipelines leveraging Cloud Run, BigQuery, and Document AI for high-growth startups.
- Engineered distributed computing environments, including deploying Slurm GPU clusters via Cluster Toolkit for high-performance computing workloads.
- Developed full-stack proof-of-concepts, integrating frontend frameworks with managed backend services to validate complex business architectures and data flows.
- Deployed containerized machine learning models for training workloads and established managed inference endpoints on Vertex AI.

Solutions Engineer (Oct 2021 - Jan 2022)

- Led full-stack development of an internal demo platform using an Angular frontend and Python backend, streamlining the deployment of GCP integrations.
- Engineered an evaluation pipeline for Vertex Search-grounded LLMs, optimizing an internal Retrieval-Augmented Generation (RAG) endpoint used to automatically answer sales and forum inquiries.
- Configured and managed diverse infrastructure deployments, ranging from highly available Managed Instance Groups (MIGs) to flexible, single-instance architectures.

PROS | Houston, TX

June 2020 – August 2020

Software Development Intern

- Developed a suite of reusable React components for an Electron application, enabling comprehensive API testing across ~40 dynamic pricing endpoints.
- Improved application performance by implementing frontend optimizations that significantly reduced component rendering times and increased responsiveness.
- Introduced unit and integration tests using Jest and React Testing Library, improving overall code reliability.

Skills

- **Languages:** Python, JavaScript, TypeScript, C++, SQL, HTML/CSS
- **Cloud & Infrastructure:** Google Cloud (GCP), Docker, Kubernetes (GKE), Terraform, Git, CI/CD, Linux, Slurm
- **Web Frameworks:** React, Node.js, Express.js, Angular, Flask, Django
- **Data & AI:** Vertex AI, BigQuery, Document AI, Dataflow, RAG Pipelines

Projects

Coda.sys (Terminal-Native Operating System)

Python, TypeScript, Node.js, GitHub Actions

- Architected a fully automated CI/CD pipeline and local telemetry system to manage a structured SWE upskilling pivot.
- Developed a local Node.js/TypeScript Model Context Protocol (MCP) server, enabling AI agents to natively invoke local Python scripts and read sprint state securely.
- Integrated GitHub Projects via GraphQL and Python CLI tools (add_task.py) for bi-directional sprint planning and task synchronization.

Playlist Intersection for Spotify

React, Node.js, Express, Firestore, Spotify API, Cloud Run

- Engineered a full-stack dashboard managing Spotify OAuth 2.0 authentication and stateful user sessions.
- Developed an Express.js backend to handle asynchronous data fetching and compute intersections across multiple user "Liked Songs" libraries.
- Containerized the service using Docker and deployed it to Google Cloud Run for scalable, serverless execution.

Education

University of Houston | Houston, TX

December 2020

- Bachelor of Science in Computer Science, Minor in Mathematics (GPA: 3.88)
- Relevant Coursework: Data Structures & Algorithms, Software Engineering & Design, Operating Systems, Database Systems, Computer Architecture
